

Critical Information Summary:

NBN Fibre

Information About The Service

The NBN service is a broadband internet service which uses the NBN Fibre (FTTP, FTTB or FTTN) Network to deliver internet connectivity to the Network Boundary Point at your premises.

With every NBN plan we include our Netphone (Voice over IP) phone service at no additional cost, offering great call rates and call inclusions depending on your plan of choice. The Critical Information Summary for Netphone can be found at: www.westnet.com.au/about/legal/cis/cis-voip.pdf

Requirements & Availability

The NBN service is only available within an NBN (FTTP, FTTB or FTTN) ready service area. NBN availability can be checked using our coverage checker at: www.iinet.net.au/internet/broadband/nbn/coverage/

You will require an NBN ready modem, with support for all types of NBN services. Your modem will need to be WiFi or VoIP enabled if you want to connect wireless devices or make use of your Included Netphone service.

Minimum Term

NBN plans are available on either a no lock-in contract, or on a 24 month contract.

With a 24 month contract, you can choose to take a WiFi modem (for which a \$10 delivery charge applies), and no activation charge is payable (\$79.95 on a no lock-in contract).

Included Features

There are a range of value-added features included with NBN plans, with further detail on the website.

- You must have an active BBU installed. (This is optional and you can elect to get this installed at no extra cost when you apply for NBN FTTP service with Westnet)
- Access to the internet will only be available with a battery powered device (like a laptop) by connecting directly to the data port (UNI-D) on the NBN Connection Box (NTD).
